

Test Case – SmartGN Digital GN Service Management System

Website under test: <https://smartgn-digital-gn-service-management-shup.onrender.com/>

Note: This is a new test-case set based on the SmartGN service areas described publicly (digital certificate requests, appointments, welfare/allowance services, disaster relief, multilingual assistance, and role-based access). The website's live page content could not be reliably extracted in this review, so Actual Result and Status are left as Not Tested for completion during hands-on testing.

Service Request and Appointment Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Status
TC-001	Submit a certificate request with valid details	Log in as a resident → Open the certificate service → Enter all required details → Submit the request.	The request should be saved and a confirmation or reference number should be displayed.	Not tested — record result during execution.	Not Run
TC-002	Submit a certificate request with missing required fields	Open the certificate request form → Leave one or more required fields blank → Submit.	The form should identify missing fields and should not submit an incomplete request.	Not tested — record result during execution.	Not Run
TC-003	Track a submitted service request	Submit a test request → Open the request/status area → Search using the available reference or tracking option.	The correct request and its current status should be displayed to the logged-in resident.	Not tested — record result during execution.	Not Run
TC-004	Book a GN appointment using an available slot	Log in as a resident → Open appointment scheduling → Select an available date and time → Confirm booking.	The appointment should be created and its date, time, and confirmation should be shown.	Not tested — record result during execution.	Not Run
TC-005	Attempt to book an unavailable appointment slot	Open appointment scheduling → Select a slot that is already booked or unavailable → Try to confirm.	The system should prevent double-booking and ask the user to select another slot.	Not tested — record result during execution.	Not Run
TC-006	Submit an allowance or welfare application	Log in as a resident → Open the allowance/welfare section → Complete the required fields → Submit.	The application should be recorded and a submission confirmation or reference should be provided.	Not tested — record result during execution.	Not Run
TC-007	Report a disaster or emergency-relief need	Open the disaster-relief section → Enter the required incident/request details → Submit the report.	The report should be submitted with a confirmation and be available to authorized staff for review.	Not tested — record result during execution.	Not Run

Language, Assistant, Access Control, and Usability Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Status
TC-008	Switch the interface language	Open the language selector → Choose another supported language (Sinhala, Tamil, or English) → Review the page labels.	Supported interface text should change to the selected language without breaking navigation or layout.	Not tested — record result during execution.	Not Run
TC-009	Open the system assistant and ask a service question	Open the assistant/chatbot → Ask a basic question about applying for a certificate or booking an appointment.	The assistant should provide a relevant response in a supported language or guide the user to the relevant service.	Not tested — record result during execution.	Not Run
TC-010	Resident attempts to access an officer-only function	Log in as a resident → Attempt to open an officer/admin URL or use an officer-only action.	Access should be denied or the user should be redirected to an authorized page; restricted data should not be exposed.	Not tested — record result during execution.	Not Run
TC-011	Officer reviews a submitted request	Log in with an authorized GN-officer test account → Open the request-management area → Open a submitted test request.	The officer should be able to view permitted request details and available review actions.	Not tested — record result during execution.	Not Run
TC-012	Verify request status after an authorized status update	As an authorized officer, update a test request to another permitted status → Save → Check the resident-facing status view.	The update should be saved and the resident-facing status should reflect the latest permitted status.	Not tested — record result during execution.	Not Run
TC-013	Use the application on a mobile-sized screen	Open the website in browser developer tools or on a phone → Set a narrow viewport → Navigate through the main service pages.	Menus, forms, buttons, and content should remain readable and usable without unintended horizontal overflow.	Not tested — record result during execution.	Not Run
TC-014	Refresh a page after submitting a request	Submit a test request → Note the confirmation/reference → Refresh the page or revisit the request list.	The saved request should remain available and should not be duplicated merely by refreshing a confirmation page.	Not tested — record result during execution.	Not Run

Execution guidance

- Use test accounts and dummy data only. Do not submit real NIC numbers, sensitive personal details, or genuine emergency reports while testing.
- Replace each “Not tested” Actual Result with what you observe, and change Status to Pass or Fail after execution.
- If a feature is not present in the deployed version, record “Feature not available” in Actual Result and mark the case Not Applicable rather than assuming it exists.
